Instagram's Android app has been downloaded more than 5 million times less than a week after being released. Not bad for a company that recently agreed to be bought by Facebook for \$1 billion. In comparison to its Android version, Instagram's iPhone app was a slow burner. On iOS, it took Instagram around six months to reach 5 million users, while on Android it took just six days, according to the Google Play stats, which show Instagram for Android has between 5 million and 10 million downloads already. On its first day, Instagram for Android had 1 million downloads, while the iOS version now clocks more than 30 million users. So why the fascination with Instagram? It's not like Instagram is offering something that other iOS and Android photo apps don't do. My colleagues found nine great Android alternatives to Instagram and many other options for iPhone users. But Facebook saw potential in Instagram. The social networking giant announced that it will acquire Instagram for roughly \$1 billion in cash and stock. Although it said Instagram would remain independent for the time being, it's still unclear what Facebook wants to do with its purchase. Last year reports indicated that Facebook was looking into bringing Instagram-like photo filters to its mobile app, or perhaps a stand-alone app that would have similar functionality. By buying Instagram, it looks more likely now that Facebook will integrate the photo filters to its own mobile app. Dan Frommer opines though that by acquiring Instagram, Facebook overcame one of its biggest threats, a mobile-only, mobile-first social network based on blurry photos. Om Malik also advances this theory, saying Instagram found and attacked Facebook's weakness, mobile photo sharing, and Facebook was scared because the social network is essentially about photos. Follow Daniel Ionescu and Today @ PCWorld on Twitter Google is gradually releasing versions of the Chromebook software (Chrome OS) that supports the Google Play store. If you aren't sure your device supports Google Play, Google provides a growing list of devices that support it. If you are still uncertain, make sure your Chromebook has Chrome OS version 53 or higher. To make sure your Chromebook is up to date and can run Google Play, check the current version. Here's how. In the lower-right corner of the screen, select the taskbar (where the time displays). Select Settings (which looks like a gear). Select About Chrome OS. Select Advanced if you don't see this option. The version of Chrome OS appears on the right side. After you've confirmed you have the correct version, open the Play Store. (If you recently updated, you should have seen this install.) If you don't have version 53 or higher, select Check For Updates to see if there's an update for your Chromebook. Now it's time to find some apps to install. Select the Start button (which looks like a white circle). Either enter Play Store in the search menu or select the up button to display more apps. Select the Play Store icon. Now you're ready to find fun and productive apps. At the top of the screen, select the box that says Google Play. This is the search box you'll use to find apps. Enter your search criteria and press the Enter key. For example, if you need a calendar app, enter calendar. The search results appear. Select each result to read a summary of the app, see some screenshots, and read reviews of the app. Some apps are not free or have in-app purchases to enable certain features. When you decide on an appropriate app, select Install. The view shows the app is downloading and has a progress bar to show its installation progress. Once the app is installed, the app information screen displays an Open button instead of Install. Alternatively, go to the apps list and click the icon. You now have a new app to play with. The Google Web Store is what Chrome OS systems used before Google implemented access and usage of the Google Play store. While many apps are listed in both places, the Web Store may not have the selection the Play Store has. Select the Start button (it looks like a white circle). If Web Store doesn't appear in the Frequent Apps list, select the Up arrow to

See all apps. Select the Web Store icon. Press the Apps button. From here, in the upper-left corner of the Chrome Web Store logo, enter search criteria for the app you want. After you enter your search criteria, press Enter. Just like on the Play Store, selecting a listing provides additional information on the selected app. After you decide which app you want to install, select Add to Chrome in the app details window. Alternatively, select Add to Chrome in the app search results window. After you select the Add to Chrome button, a dialog box appears and asks if you want to install the app. If so, select Add extension. Once the installation has completed, another dialog box appears notifying you of the completion. In the app search list, you'll find a green button to Rate it and a small green banner on the app stating Added. Or, in the app details view, it says Added to Chrome. If this is your view, then the app is installed and ready for you to use. Thanks for letting us know! Get the Latest Tech News. Delivered Every Day Subscribe Tell us why!
