A screenshot of an Android application interface. At the top, there's a status bar with icons for signal, Wi-Fi, battery, and the time 1:25. The main screen has a dark background with a blue Wi-Fi icon and the text 'wifi file transfer'. Below this, it says 'Press button to start:' followed by a large grey button with the word 'Start' in white. At the bottom, there are three icons: a settings gear, a question mark, and a crossed-out 'X', labeled 'Settings', 'Help', and 'Upgrade' respectively. The very bottom shows the standard Android navigation bar with back, home, and recent apps icons.

RAM and ROM make up the total memory capacity of a mobile phone. Over time, more and more files consume system resources. When the RAM is almost full, the device may run slowly and not reach peak performance. To free up space on Android, mobile users usually move data to another independent storage such as a microSD card. Well, do you know how to move files to SD cards in Android? Well, the following helpful tips can help you a lot. Skip ahead for details. The Gallery app on some Android devices allows you to upload files to the Android SD card. All albums stored on an SD card are marked with a small SD icon in the lower left corner of the album. Learn how to use Gallery app to move files from Android to SD card without Android file manager. Open the Gallery app on your phone and tap Albums. Go to Options > Create Album. Tap "Internal Storage" > "SD Card". Select an album name and click Create. Go back to "Images". Touch and hold the photos you want to move. Tap More > Move to Album. You may also like: Tip 2. Move files from Android to SD card with Files by Google As a file management tool developed by Google, Files by Google allows you to delete junk files to free up space on Android, share files between phones and Android to SD transfers from internal memory. How to transfer files to Android from SD card using Files by Google? Before you begin, download and install Files by Google. Here you can see the occupied space in the internal memory and on the SD card. Media files will be listed under Delete, which may prompt you to select or free up space. You can now move files to SD from the "Clean" area or browse files and copy them to specific folders. In the first case, scroll down the screen via the "Erase" area > go to the "Move to SD card" panel > select your media files > click "Move to SD card". In the second case, go to the Overview panel > Internal Storage > tap on iFile > click the three dots icon > click Move To. What to do if Files by Google doesn't show up your SD card? (Quick view: Go to Settings > Device maintenance > Storage). If the card cannot be identified via "Settings", remove and reinsert it. (How do I fix a corrupt SD card on Android? Assuming it's not recognized by Google Files, it might be formatted as internal storage.) A file manager for Android phones like Samsung's My Files collects several types of data, including Photos, videos, apps, updates, etc. The app itself makes it easy to transfer files to your SD card. Then let's see how to transfer files from Android to SD card using My Files/File Manager. Open My Files/File Manager on an Android phone. From the list of available file categories, tap the Documents folder. Press Menu > Edit > select All Files. You can also select individual files before clicking Move. Navigate to the My files icon and click SD card. Click on a location on the map and select "Move Here" to begin moving your footage to your SD card. Repeat these steps for any other data files you want to transfer to the card. Read more: Tip 4. Move files from Android to SD card with Phone Master Don't want to move Android photos and videos to SD card manually? Try Phone Master. This smart application allows you to automatically transfer media files from internal memory to card with one touch. Learn how to switch from phone to SD card using Phone Mater app: Download Phone Master app from Google Play. Install and run the app on your Android device. Allow some permissions shown on your phone screen. Click on "Toolbar" below the window. Select "File Mover" and let the app scan your Android data. Select the categories (images, audio, video, installation package and large files) that you want to move to SD card. After making your selection, click Move to SD card. If prompted, grant Phone Master access to the tab. Tip 5: Move apps from Android to SD card There are various apps that you can conveniently access from the Play Store. Devices like Samsung Galaxy S20/S10/S9 have some gadgets that can help you move app files from phone to SD card. However, please note that some apps will not be available after the migration, while some other apps on the card may still leave data in the phone's internal storage. By the way, if "Move" or "Move to SD card" is grayed out, it means that the app cannot be transferred at all. How to move apps to SD card in Android? Go to Android settings. Go to Apps & Notifications > All Apps/Manage Apps. (Are there any great Android app managers out there?) When you see all the available apps, select the one you want to move to the SD card. Select "Storage and Cache" and click "Change" under "Storage in use". To move apps to SD card, go to "SD Card" > "Move". Tip 6. Transfer contacts from Android to SD card Many people want to backup their Android contacts to Google, which can be reliable and easily accessible. It's also not a bad idea to transfer your phone to the SD card for contacts. How to transfer contacts files from phone to SD card? Launch the Contacts app on your Android phone. Tap the "Gear" or "Menu" icon in the upper right corner of the screen. Select "Import/Export". Then choose Export Contacts > Export to .vcf file. The file manager will be activated and please enter the location to copy the Android contacts to your SD card. Transfer files to SD card FAQ Q1: How to change the camera default storage to SD card? Open the camera app on your phone. Tap the gear menu icon on the top left to open the Settings section. Click on "Storage". Tap the SD card (depending on your device, it may be labeled "External storage" or "Memory card"). From now on, all photos or videos taken will be saved directly to the SD card. Q2. What files should not be moved from Android to SD card? OBB files used by some Android apps. WhatsApp database. Downloaded data from streaming apps. Q3: What if I can't Copy files to SD card on Android? Check that the SD card is inserted correctly. Make sure there are no read or write errors. Check if the SD card is damaged. Check the available space on the SD card. Restart your Android device and try again. Try another SD card. Our Verdict This section shows you 6 ways to transfer files from phone to SD card. Of course, there are many tools that can be used to copy various files to a card. It is not recommended to try any unauthorized program here. First, many of them recommend rooting your Android phone; Second, some others may interfere with the developer settings. Also, some files are better stored in the phone's internal storage rather than the SD card. Related Articles: How to Transfer Photos from SD Card/Storage to iPhone? [Fixed 2022] Any tips on how to fix SIM missing errors on Android? 16 Great Ways to Export SMS from Android to CSV: 3 Ways to Export SMS to CSV File [5 Easy Ways] How to Transfer Photos from PC to Android? 6 Common Ways to Access iCloud from Android Phone/Tablet. How to recover data from broken Android phone screen? All Android smartphones have limited internal storage that fills up over time. If you've been using your smartphone for more than a few years, you may already be experiencing problems with insufficient space. Because over time, the size of the application and the space required for the related data increases significantly. It's hard for an old smartphone to keep up with the storage demands of new apps and games. In addition, personal media files such as photos and videos also take up a lot of space. So here we provide a solution to transfer files from Android internal storage to SD card. As mentioned above, insufficient internal memory can cause many problems. It can slow down and slow down your device; Apps may fail to load or crash, etc. Even if you don't have the internal memory, you will not install new applications. Therefore, it is very important to move files from internal storage to another location. Now, most Android smartphones allow users to expand the storage capacity using an external memory card or SD card. There is a dedicated SD card slot where you can insert a memory card and transfer some of your data to free up internal storage space. In this article, we will discuss it in detail and help you transfer different types of files from internal memory to SD card. How to transfer files from android internal storage to sd card. Things to Consider Before Transferring As mentioned, SD cards are a cheap solution to running out of storage space. However, not all smartphones are designed for this. You must ensure that the mobile phone you are using has expandable memory and allows you to insert an external memory card. If not, there's no point in buying an SD card and you'll have to look for other alternatives like cloud storage. The second thing to pay attention to is the maximum capacity of the SD card that your device supports. It's easy to find micro SD cards on the market with up to 1TB of storage. However, it doesn't matter if your device doesn't support it. Before purchasing an external memory card, make sure that its capacity does not exceed the specified amount of expandable memory. Transfer photos from internal memory to SD card Your photos and videos take up most of the internal memory. Therefore, the best way to free up storage space is to transfer photos from internal storage to an SD card. Follow the instructions below to find out how. 1. The first thing you need to do is open the file manager app on your device. 2. If you don't have it, you can download Files by Google from the Play Store. 3. Now tap on the option "Internal Memory". 4. Locate the DCIM folder here and open it. 5. Now press and hold the camera folder and will be selected. 6. Then tap the Move option at the bottom of the screen and select a different location option. 7. Now you can go to your SD card, select an existing folder or create a new folder and the selected folder will be transferred there. 8. Similarly, you will also find the "Images" folder in the internal memory which contains other images downloaded to your device. 9. If you want, you can transfer them to the SD card in the same way as the Camera folder. 10. While some images such as those taken by your camera can be directly assigned to save to the SD card, others such as screenshots will always be stored in the internal memory and you will need to transfer them manually from time to time. Read "How to save photos to SD card on Android phone" to find out how to do it. Change the default storage for the camera app Instead of manually transferring photos from the file manager, you can set the default storage for the camera app to SD card. This way, all subsequent images will be saved directly to the SD card. However, the built-in camera app of many Android smartphone brands does not allow you to do this. You need to make sure that the Camera app allows you to choose where you want to save the photos. If not, you can always download another camera app from the Play Store. Here's a step-by-step guide on how to change the default storage location for the Camera app. 1. First, open the Camera app on your device and tap Settings. 2. Here you will find "Storage" option and click on it. If this option is not available, you need to download another camera app from Play Store as mentioned above. 3. Now in "Storage location" setting, select SD card as default storage location. Depending on the original manufacturer, it may be labeled "External Storage" or "Memory Card". 4. That is all; you are ready Any picture for you now saved to your SD card. Transfer documents and files from Android internal storage to SD card. If you are a professional, you must have many documents on your mobile phone. This includes text files, PDF files, spreadsheets, etc. Although these files are not that big individually, in large numbers they can take up a lot of space. The best part is that you can easily transfer them to your SD card. It does not affect or change the readability or accessibility of files, nor does it protect against internal memory clutter. Follow the instructions below to learn how. 1. First, open the file manager app on your device. 2. Now tap on the "Documents" option, you will see a list of all the different types of documents stored on your device. 3. Press and hold one of them to select it. 4. Then tap on the selection icon in the upper right corner of the screen. On some devices, you may need to click the three-dot menu to get this option. 5. Once they are all selected, click the Move button at the bottom of the screen. 6. Now go to your SD card and create a new folder called "Documents" and then click the "Move" button again. 7. Now your files will be transferred from internal storage to SD card. Transferring apps from Android's internal storage to an SD card If your device is running an older Android operating system, you can transfer apps to an SD card. However, only some apps are compatible with SD card instead of internal storage. You can move system app to SD card. Of course, your Android device must also support an external memory card to make the switch. Follow the steps below to learn how to move apps to SD card. 1. First, go to "Settings" on your device. 2. Now tap on the Apps option. 3. Sort apps by size if possible so you can send large apps to the SD card first and free up a lot of space. Open any app from the app list and check if the "Move to SD card" option is available. If so, tap the appropriate button and that app and its data will be transferred to the SD card. Now, if you are using Android 6.0 or later, you cannot transfer apps to the SD card. Instead, you need to convert the SD card to internal storage. Starting with Android 6.0, you can format an external memory card to be considered part of the internal storage. This makes it possible to significantly increase the memory capacity. You can install apps in this extra storage space. However, this method has some disadvantages. The newly added storage is slower than the original internal storage and cannot be accessed from another device after formatting the SD card. If you agree, follow the steps below to convert your SD card to internal storage expansion. 1. The first thing you need to do is insert your SD card and then tap on Settings. 2. Select Use as internal storage from the list of options. 3. This will format the SD card and delete all existing content. 4. After the conversion is complete, you will have the option to move the files now or later. 5. That's it, now you can go. Your internal memory now has more capacity to store apps, games and media files. 6. You can reconfigure the SD card as external storage at any time. To do this, open Settings and go to Storage and USB. 7. Here, click on the name of the card to open its settings. 8. Then select "Use as Portable Storage". Recommended: We hope you found this information useful and that you were able to transfer files from Android internal storage to SD card. Android smartphones that have an expandable SD card slot will save users from the problem of insufficient storage. Adding a Micro SD card moving some files from the internal memory to the SD card is a smart way to prevent the internal memory from running out. You can easily do this with a file manager and follow the steps in this article. However, if you don't have the option to add an external memory card, you can always use cloud backup. Apps and services like Google Drive and Google Photos offer inexpensive ways to reduce the strain on your internal storage. You can also transfer some files to your computer with a USB cable if you don't want to download them, then download the data again. again.
