Best firefox mobile adblock. Best mobile adblock reddit. Best mobile game ad blocker. Best mobile ad blocker iphone. Best ad blocker chrome mobile. Best youtube ad blocker mobile. Best free mobile ad blocker. Adblock mobile best ad blocker.

By James Stone i Jupiterimages/Photos.com/Getty Images The ad blocker or pop-up blocker installed in your web browser's window can only be removed if it was installed as part of a third-party application. If this pop-up blocker is a built-in browser feature, you will not have the option of removing it. You will, however, be able to disable the pop-up blocker from the browser's settings menu. Once you have uninstalled a third-party ad-blocker or disabled the pop-up blocker in your browser, your browser will no longer suppress pop-up advertisements, thus making your computer more susceptible to unwanted and potentially harmful content. Click the "Start" button, and click the "All Programs" link. Click the name of the pop-up blocker's folder, and then click the "Uninstall" shortcut link. The installation wizard displays on screen. Click the "Next" button to begin the uninstallation. Click the "Finish" button after the process finishes. Restart your computer. Click the "Start" button, and then click the "Control Panel" link. Click the "Uninstall a program" option under the "Programs" section. Click the name of the pop-up toolbar you wish to remove, and then click the "Uninstall" button. The installation wizard displays on screen. Click the "Next" button to begin the uninstallation. Click the "Finish" button after the process finishes. Restart your computer. Click the "Start" button, and then double-click the selected browser's application shortcut. Click the "Tools" menu, and then click the "Options" heading. Click the "Content" tab, then click the "Block pop-up windows" check box. Click the "OK" button to apply the changes, and close the window. Restart your browser. If you've decided once and for all that you can't stand another video pre-roll commercial, then it's time to install an ad blocker. But which one? Don't worry. We picked out the best ad blockers for Chrome. Our top pick, AdBlock, does exactly what its name suggests, but it also allows you to customize which sites are allowed to show ads and which types of ads are shown. Contents AdBlockAdBlock PlusuBlock OriginAdGuardGhostery But if AdBlock doesn't quite meet all of your ad blocking needs, be sure to check out the other picks for Chrome ad blockers on this list. However, it is worth noting that many of the world's free websites, Digital Trends included, rely on advertising revenue to operate. If you want your favorite sites to continue working as you see them now, make sure to whitelist them. AdBlock As one of the most widely-used ad blockers in the world, we would be remiss if we didn't at least give a passing mention to AdBlock. With its very on-the-nose name and long-running availability, it's often what people turn to when they consider blocking adverts online today. The AdBlock extension for Chrome works automatically, blocking ads on static web pages and online video sites like YouTube. It also lets you set up whitelists of sites and ad types to allow through the filter if you so choose. Through its filter list subscription system, you can customize your web browsing experience so that only ads you like are shown, or untick it all and block just about everything. You can even have the app remove other webpage aspects you find distasteful, like social networking links, and protect yourself against some potential malware attacks. AdBlock does participate in the "Acceptable Ads" initiative, so there are ads it allows through (if you choose) that meet certain requirements. AdBlock is also known to be a little resource heavy, especially if you like to have many tabs open at one time, and there have been some claims of it not blocking YouTube ads particularly well. Finally, AdBlock receives regular updates that help the software keep up with all the latest internet ad delivery methods, which is always important for good ad-blocking programs. AdBlock Plus AdBlock Plus is the original granddaddy app for blocking ads online, and it's still just as popular today as it was when it first took the web by storm. Blocking technology takes out banner ads, video pre-roll ads, social networking ads, and pop-ups. It offers a comprehensive ad-blocking service to all who install its Chrome extension. With an easy-to-navigate interface and customizable filter list, you can decide exactly which ads you want to see and which ones you never want to see again. Its whitelisting function lets you make sure your favorite sites still display ads so they can continue to operate. If you allow acceptable ads, you can let a few through automatically to help sites that stick to the rules. Note that around five years ago, AdBlock Plus was accused of secretly offering to push ads through in exchange for under-the-table payments, which AdBlock Plus didn't exactly deny. The organization appears to make unique deals with larger organizations that may let some extra ads through. uBlock Origin Entirely free and open source, uBlock Origin is another popular ad blocking extension for Google Chrome because it does a great job of blocking ads without taxing your system in the process. Utilizing similar block lists to AdBlock Plus, uBlock offers comparable blocking capabilities. Still, by leveraging what style resources are required for individual web pages, it can be more efficient in its operation. Its specific ability to counter pesky pop-under ads has also been noted, which have become more common as more browsers come with their own pop-up blockers. Users can also leverage uBlock's own filters for ads, malware, and privacy concerns, as well as their own custom-created filters. Individual sites can be whitelisted by hitting the big power button inside the tool itself, and there are detailed stat breakdowns to let you know how effective a tool it has been since installation. AdGuard Another popular ad blocker for Chrome is AdGuard. Capable of effectively blocking almost all ads across static web pages, video streaming sites, and social networks, AdGuard keeps an eye out for pop-up and pop-under ads, too. The lightweight Chrome extension has additional options for blocking tracking and installing nefarious software like dialers, adware, and other malware. One of its biggest claims to fame is its ability to speed up your web browsing experience and reduce your bandwidth by cutting back on all the needless clutter that comes with some ads and trackers. Some users have reported annoying notifications that try to encourage you to purchase the premium version. Still, other than that, AdGuard has almost exclusively positive reviews from its millions of users. Ghostery Even though it functions a bit differently from many of the other ad blockers included in this list, Ghostery is still a helpful tool for personalizing your web browsing experience and making it just how you want it to be. Its main purpose is to block web trackers and analytics devices that collect information about you, but it also has its own powerful adblocker. What truly attracts people to Ghostery over the many other available options is its more extensive choices for users. If you want to prevent particular trackers or ad types from accessing your information, you can. To make this simple, even for those brand-new to the idea, Ghostery breaks down each page you visit with thorough details of the kinds of trackers and ads being used by that specific site. You can then eliminate components at will or make more large-scale, sweeping blocks. The only disadvantage of Ghostery is that you'll have to put in the time and effort in explaining how you want it to work. While other ad blockers perform sufficiently altogether, if you try this approach with Ghostery, you might discover many features of the web non-functional. We suggest taking a little time to get it right, though, and Ghostery just might become your preferred tool for customizing your web browsing adventures. Editors' Recommendations One of iOS 9's most coveted features is its ability to provide ad blockers (content blockers) in mobile Safari. Purify is one of the first ad blockers for iOS 9, and it works surprisingly well to clean up the mobile Web in Safari. [ Related: 7 tips and tricks for iOS 9 ] I signed up for the Purify beta a while back, and got an email the other day inviting me to try it via the TestFlight app. So I installed TestFlight, then installed Purify on my iPhone 6 Plus. I wasn't sure how well Purify would work to clean up the mobile Web in Safari, but I was pleasantly surprised indeed. To use the Purify ad blocker in iOS 9, you first need to enable it in the Content Blockers menu for Safari in the Settings app. Don't worry if you haven't used a content blocker before in iOS 9, Purify has a helpful animated demo that explains how to use it. And I've included some instructions and screenshots below so you can take a peek at how to use it right now. How to install and enable the Purify ad blocker in iOS 9 The Purify app has been released, and you can download it right now from the app store. It costs \$3.99. Here's how you can install and enable the Purify ad blocker in iOS 9. 1. Download the Purify app from the app store on your iOS device. 2. Open the Settings app. 3. Tap on Safari. 4. Scroll down and tap on Content blockers. 5. Tap the Purify button to enable Purify in Safari. And that's all you need to do to get Purify working in Safari in iOS 9. But Purify blocks more than just ads, so if you want to customize how it works you'll need to do a bit more inside the Purify app itself. How to configure the Purify ad blocker in iOS 9 The preferences menu in the Purify ad blocker for iOS 9 also lets you block images, scripts and even fonts. Here's how you can configure the Purify ad blocker in iOS 9: 1. Open the Purify app on your iOS device. 2. Tap on the Preferences button at the bottom of the app. 3. Tap the Ads and Tracking button to enable or disable blocking of ads and trackers. 4. You also have the option of blocking these additional resources: Images, scripts and fonts. Just tap the button next to each to enable or disable blocking them in Purify. 5. Tap on Whitelisted Sites under Personalization to edit your list of whitelisted sites (more on how to whitelist sites below). It's quite easy to configure Purify to your liking, so do take a minute or two to look at the preferences menu in the app. How to whitelist sites in the Purify ad blocker in iOS 9 Tap the Sharing button to add the Purify Whitelist button to your Sharing menu in iOS 9. As always, it's a very good idea to whitelist the sites you really care about so they can continue to generate revenue that will let them keep producing the content you enjoy. Whitelisting sites is very easy and fast in Purify, here's how you can do it: After you add the Purify Whitelist button to your Sharing menu, tap it to enable or disable a site in your whitelist. 1. Open the site you want to whitelist in Safari. 2. Tap on the Sharing icon. 3. Tap on More. 4. Tap on the Purify Whitelist button to add it to the Sharing menu. 5. Tap the Purify Whitelist button that now appears in the Sharing menu. 6. Tap the button next to the name of the site to whitelist it. Once you've added the Purify Whitelist button to the regular Sharing menu, it's very quick and easy to whitelist your favorite sites. They'll appreciate your continued support and you'll feel glad that you're doing your part to help them stay in business. The Purify ad blocker for iOS 9 is off to a good start So far I'm pleased with the Purify ad blocker. It definitely makes Web pages load faster, and it gets rid of annoyances like popup ads, etc. Browsing the Web on my iPhone 6 Plus with Purify on is certainly a better overall experience. However, I did encounter one problem with Purify. Even though I had it set to block trackers, I still saw some social media buttons showing up. I detest them, so it might be a good idea for the Purify developer to add Fanboy's Social List to Purify's ad blocking list. Social media buttons have become a pestilence on the Web, so making sure they are removed should be a top priority for any ad blocker. The social media button snafu aside, the Purify ad blocker looks like it's in very good shape. I think a lot of iOS 9 users are going to be very happy with it when they are able to download it from the app store. Hopefully it will be available soon after the release of iOS 9. Purify is one of the first, but it definitely won't be the last ad blocker released for iOS 9. I suspect that the app store will soon be inundated with ad blocking apps. We'll have to wait and see which ones survive over time, and which ones offer the best blocking options in iOS 9. Did you miss a post?
